**Subject:** FW: ATSDR's review of air toxics data so far for Ames Warehouse

Fyi Rich and Charles – got this this morning. EPA definitely would like us to wait to do a more comprehensive email over piecemeal ones, so good call on that, Rich. Lora

Thanks Deb. I will be at the RRT and am glad to talk about this with you then. I will get there Wed morning, stay overnight and then leave Thurs after the full mtg - I will try to find you when you are not running a meeting?

You are right, we have been getting data piecemeal. What we have so far for air is EPA's first round of SUMMAs from you and one set of OH's SUMMAs via email, what CTEH posted on their website (one set of mini cans), and WVDEP's handheld monitoring for volatile organic compounds, oxygen, hydrogen sulfide, carbon monoxide, chlorine, and ammonia posted on their website (I think this WVDEP info is also represented on the CTEH website?). We also have the surface water results for that one runoff/outfall sample from the state. We have not seen EPA's Area Rae data, because you mentioned that was under review.

Thanks for responding,  
Lora

Lora

I would prefer to hold off on any health updates (even drafts) until we have most of the data than going with the incremental reviews since the emergency is over. I'm not even sure of what data you have looked at from EPA, WVDEP, Ohio and CTEH...since you were getting it piece meal.

I know that our Area Rae data is being reviewed by START to document some discrepancies between the data collected by Viper and the on-site monitoring of the Area Raes. So that data (if you looked at it ) may have qualifiers which may/may not change your review.

Not sure if you are going to be at the RRT and we could talk then – if not I will have time to consolidate what data was collected and by what agencies – just so we are all working off the same information.

Thanks

Debbie Lindsey

**Subject:** ATSDR's review of air toxics data so far for Ames Warehouse

Hi guys

We are working on our review on the ATSDR side of the air toxics data from EPA, OH, and CTEH. Nothing acute noted, just some long term/cancer type exceedances. We were thinking of holding on to this draft until the next round of EPA's air data, the ash data and any other water data might come in the next week or so, and covering all of that info. Does that sound ok to you? I can check in with Walt, Jim and Rebecca at state/local level too but wanted to get your opinion first. Also, I am assuming the email format we have been using is still ok, or would you appreciate something more formal?

Lora
